Sympathy for the lamprey

"Lampreys don't charm most people," begins a pamphlet from the Minnesota Sea Grant.

Truer words, my environmental research friends, truer words

Yes, it's hard out there for a lamprey. Already cursed with a face not even their mothers (who die shortly after spawning) could love, these fish were further saddled with 50 years of bad PR brought on when one invasive species, the sea lamprey, moved into the Great Lakes and wreaked a trail of parasitic havoc from New York to Minnesota. Lost in the shuffle were several native lamprey species, some of which aren't even parasitic. Despite living in the Great Lakes for 1000s of years in co-evolved cooperation with other fish, non-invasive lamprey have paid the price for their cousin's misdeeds.

Even within native range

New Brunswick

Blood-sucking, snake-like fish arrive in New Brunswick waterways to spawn

Video taken near Belleisle shows the parasitic fish spawning and building nests

Mia Urquhart - CBC News - Posted: Jun 13, 2022 5:00 AM CDT | Last Updated: June 13, 2022

The mouth of a sea lamprey, a species of fish that attaches to a host, feeds on blood and has teeth on its tongue. (Tina Weltz/BCOM)

New Brunswick

'Tis the season for alien-like fish to spawn and die in N.B. fresh water

It could be right out of a Stephen King novel — or maybe just the next chapter of 2020, the one that follows COVID-19 and murder hornets.

It may be bad news that it's once again spawning season for the parasitic sea lamprey, meaning they're moving upriver in New Brunswick in droves.

Dr Kurt Samways (University of New Brunswick)

Although that is starting to change

Same fish, different story

Sea lampreys are native to Atlantic Canada. They are part of the ecosystem, and other species have learned to evolve with them. They are even beneficial to fish such as salmon, by returning valuable nutrients to the environment when scores of them die after spawning.

Dr Marc Gaden (Great Lakes Fishery Commission)

Nova Scotia

Nova Scotia Power to pull plug on tidal station, seeks \$25M from ratepayers

Company wants customers to pay to write off Annapolis Royal, N.S., plant

Paul Withers - CBC News - Posted: Feb 23, 2021 12:36 PM CST | Last Updated: February 23, 2021

Nova Scotia Power is permanently retiring its Annapolis Royal, N.S., generating station, which has been shut down since 2019. (Patrick Callaghan/CBC)

Nova Scotia Power has decided to pull the plug on North America's only tidal power generating station and wants its customers to pay \$25 million over the next decade to write off the asset.

The utility says the decision to permanently retire the 37-year old Annapolis Generating Station in Annapolis Royal, N.S., was due to the failure of a "crucial component" in the generator and an authorization required by the Department of Fisheries Oceans after it determined the facility caused serious harm to fish.
